

Resilient infrastructure and reliable support for the Armed Forces

The Defence Infrastructure Organisation (DIO) manages a large network of facilities across Scotland and Northern Ireland, including famous landmarks like Edinburgh Castle and military bases like Abercorn Barracks and RAF Lossiemouth. The UK Armed Forces rely on these facilities to carry out their duties, so it's important for them to have reliable and well-maintained environments to work in.

As part of the Future Defence Infrastructure Service (FDIS) programme, the DIO awarded Mitie a multi-year contract to provide comprehensive maintenance services. It's now our job to make sure essential systems, such as airfield lighting and fuel supplies, function without interruption.

By monitoring energy use and waste management at all sites, we're helping the Armed Forces to find smarter ways to operate more sustainably – cutting down on carbon emissions and enhancing biodiversity. Plus, our 24/7 helpdesk and ARIA app enable seamless collaboration and communication, so the DIO team can easily stay on top of ongoing tasks.

We're also investing in the future of the industry through our apprenticeship schemes. These are rolled out across the entire FDIS contract, training the next generation of facilities management professionals to meet the increasing demands of the Defence sector.

The Armed Forces can focus on their mission, knowing they're supported by sustainable and well-maintained infrastructure. As an ISO 44001-certified organisation, we take pride in our collaborative approach, building partnerships based on trust and shared goals. By combining effective maintenance with forward-thinking sustainability initiatives, we help create a resilient and efficient environment where the Armed Forces can thrive now and in the future.
